EDUCATION

Georgia Institute of Technology Atlanta, GA

B.S. in Computer Science, Threads: Information Internetworks & Human-Computer Interaction *May 2028*

Study Abroad: University of New South Wales (AUS), GT Shenzhen Institute (CN), University of Oxford (UK) *GPA: 3.83*

Relevant Coursework: Data Structures & Algorithms, Systems and Networks, Computer Architecture, Software Engineering

SKILLS

Languages: Java, Python, Swift, JavaScript, TypeScript, C, SQL, HTML/CSS, LC-3 Assembly
Frameworks & Libraries: SwiftUI, UIKit, React, Vue, Node.js, Express.js, Django, TensorFlow
Tools & Platforms: Git, Firebase, Azure, REST APIs, Xcode Instruments, New Relic, Postman
Data & Collaboration: MySQL, MongoDB, Tableau, Power BI, Agile/Scrum, Jira, Confluence

EXPERIENCE

Paramount+ New York, NY

Software Engineering Intern, Apple Development (iOS/tvOS) *Jun 2026 – Aug 2026*

- Cut season-picker open time 98% (12.2ms to 0.14ms) and per-cell creation time 2.3x by rebuilding two legacy Interface Builder screens in programmatic UIKit, shipped to Paramount+ and Pluto TV iOS
- Profiled the change with os_signpost markers in Instruments and parsed exported xctrace data programmatically; removed a duplicate xib and a storyboard load paid on every tap, QA-verified across 4 device/OS combinations
- Developed a Python pipeline (git grep/blame) that classifies 385 feature flags, surfacing 90 dead/stale (~9x the manual find); put the first cleanup PR into code review, and the tool drew interest from Roku and CBS
- Generalized the tool into a forkable, language-agnostic toolkit by isolating codebase-specific settings in one config block, and recommended a team-owned CI job to replace a schedule tied to one person's credentials
- Engineered a crash-triage automation across 4 production apps that pulls New Relic data via NerdGraph, routes crashes to owning teams, dedupes against Jira, and drafts tickets behind a human approval gate, saving ~3 person-hours per sprint

Institute for People and Technology (IPaT) Atlanta, GA

Student Lab Assistant *Aug 2025 – Aug 2026*

- Automated inventory tracking and onboarding for 100+ research and IoT devices, improving setup efficiency for new staff
- Debugged hardware, network, and configuration failures across 10+ active IoT research projects and documented the fixes as reusable runbooks, cutting downtime at live demos

PROJECTS

Verdict | *Paramount+ Internal Prototype* *Jun 2026 – Aug 2026*

- Built a multiplayer movie-night game for Apple TV in Swift and SwiftUI where the TV owns all game state and match logic, and guests join by QR from any phone browser with no app install
- Designed a transport-agnostic host protocol with three interchangeable transports (Firebase, LAN HTTP fallback, simulated dev mode), so multiplayer needed no data-model rewrite; covered the match logic with unit and emulator tests
- Wrote the zero-install web joiner in vanilla JavaScript over a thin, compute-free Firebase relay, and integrated the feature into the Paramount+ tvOS app via a home-screen entry point and two XcodeGen targets (in-app and standalone demo)
- Presented a technical walkthrough to the SVP of Innovation & Emerging Platforms and the VP of Product Management

Stock-O-Saurus | *MLH Hacklytics 2025, Finance Track* *Feb 2025*

- Launched a full-stack React, Node.js, and MongoDB platform comparing S&P 500 stocks on risk and return, with backend logic for volatility, returns, and risk metrics across 10+ years of historical data

Nonprofit Client Dashboard | *Bits of Good* *Feb 2025 – May 2025*

- Shipped responsive frontend and backend features from Figma designs for a nonprofit animal shelter's dashboard
- Contributed the data visualization and user-facing features, working with a team of developers to deliver to the client

Fox Vaccination | *HumaniTech* *Aug 2025 – Dec 2025*

- Architected a fine-grained computer vision pipeline that re-identifies individual foxes, enabling reliable per-animal tracking
- Established scalable monitoring workflows for population tracking and data collection with a ~10-person multidisciplinary team, supporting automated rabies vaccine distribution in Atlanta

LEADERSHIP & COMMUNITY

Startup Exchange Atlanta, GA

Community Growth & Events Team Member *Jan 2025 – Present*

- Grew campus-wide entrepreneurship events to a record 3,000+ participants in a single semester
- Secured $50,000+ in sponsorships from Atlanta's Tech & Innovation Office, Create-X, Drive Capital, and SellRaze
