EDUCATION

Georgia Institute of Technology — Atlanta, GA
B.S. in Computer Science, Threads: Information Internetworks & Human-Computer Interaction — *May 2028*
Study Abroad: University of New South Wales (AUS), GT Shenzhen Institute (CN), University of Oxford (UK) — *GPA: 3.83*

EXPERIENCE

Paramount+ — New York, NY
Software Engineering Intern, Apple Development (iOS/tvOS) — *Jun 2026 – Aug 2026*

- Reframed an assigned 10-flag cleanup as a discoverability problem and owned the fix end to end: built a Python audit pipeline and dashboard that surfaced 90 dead/stale of 385 flags (~9x the manual find), then a toolkit that drew adoption interest from Roku and CBS
- Cut season-picker open time 98% (12.2ms to 0.14ms) for Paramount+ and Pluto TV iOS users by rebuilding legacy Interface Builder screens in programmatic UIKit; profiled with os_signpost in Instruments, QA-verified across 4 device/OS combinations, and shipped
- Scoped and built an AI-assisted crash-triage workflow that pulls New Relic API data across 4 production apps, resolves code owners, and dedupes against Jira, removing ~3 person-hours of lead and manager time every sprint, with human approval kept for judgment calls
- Synthesized 25+ cross-functional discovery conversations across Engineering, Product, and Design into a working map of how a 200+ person org takes work from discovery through prioritization to release

Product@GT x UPS (LATAM Premium Segments) — Atlanta, GA
Product Fellow — *Sep 2026 – Present*

- Building the Brazil competitive landscape for UPS's international export business, benchmarking UPS against FedEx and DHL across a 6-dimension framework including transit time, cut-off times, pricing, and capabilities
- Contributing to a team assessment of international export services for B2B customers across 4 Premium segments (manufacturing, high-tech, automotive, healthcare) to isolate growth opportunities and capability gaps
- Collaborating on a 10-week engagement across 5 LATAM markets (Mexico, Dominican Republic, Costa Rica, Colombia, Brazil) to deliver an executive storyline and prioritized growth recommendations framed around potential revenue impact for UPS leadership

Corgan — Dallas, TX
Technology Research Intern — *May 2023 – Aug 2023*

- Analyzed industry trend reports and decades of data across 6+ industries on Corgan's HUGO research team to uncover emerging user needs, informing innovation strategy and investment decisions at a global architecture firm
- Conducted independent research on technology in society, narrowing to nanotech in wearable sensors and materials
- Turned qualitative research and quantitative data into visual reports and dashboards that translated complex findings into decision-ready insights for diverse stakeholders, shaping early-stage design direction

PROJECTS

Verdict | *Paramount+ Internal Prototype* — *Jun 2026 – Aug 2026*

- Owned a 0-to-1 concept end to end, defining the problem (groups stall on "what should we watch?") and iterating through three prototypes to a TV-hosted, 90-second room-decides game
- Designed the core flow: guests join by QR from any phone (no app install), swipe a shared deck by mood across 10 categories, and a live tally ends in a verdict reveal on the TV, replacing infinite browsing
- Prioritized features by distance from the core vote-tally-verdict loop: cut accounts, an iOS-only guest app, and ML picks, and sequenced tiebreak, playback, and veto features into the roadmap
- Pressure-tested the concept through prototype demos and an intern ideation review, distilling feedback into prioritized requirements, then presented the POC and technical walkthrough to executive stakeholders, incl. the SVP of Innovation & Emerging Platforms and VP of Product Management, Streaming Innovation
- Built a lightweight Swift/SwiftUI architecture where the TV hosts all game logic and a Firebase relay carries guests' votes, so adding multiplayer required no data-model rewrite; leveraged AI tooling to compress the build cycle

Fox Vaccination | *HumaniTech* — *Aug 2025 – Dec 2025*

- Developed a fine-grained pipeline that re-identifies individual foxes, enabling automated rabies vaccine distribution in Atlanta
- Partnered with a ~10-person multidisciplinary team to translate the model into a distribution and monitoring workflow

LEADERSHIP & COMMUNITY

Startup Exchange — Atlanta, GA
Community Growth & Events Team Member — *Jan 2025 – Present*

- Spearheaded the EmpowHER event and March Mentorship Chats program; connected Startup Exchange with YWLC in Houston
- Grew campus-wide entrepreneurship events to a record 3,000+ participants in a single semester
- Secured $50,000+ in sponsorships through partnerships with Atlanta's Tech & Innovation Office, Create-X, Drive Capital, and SellRaze

Institute for People and Technology (IPaT) — Atlanta, GA
Student Lab Assistant — *Aug 2025 – Aug 2026*

- Automated inventory tracking and onboarding for 100+ research and IoT devices, improving setup efficiency for new staff
- Debugged hardware, network, and configuration failures across 10+ IoT research projects, documenting fixes as runbooks

SKILLS

Product & Design: Agile/Scrum, Product Discovery, User Research, Competitive Analysis, Roadmapping, Prioritization, Jira, Figma
Technical: Python, Java, Swift, SwiftUI, UIKit, JavaScript, TypeScript, SQL, React, Node.js, Firebase, REST APIs, Git, New Relic
